

Real-time visibility, intelligent control, and actionable insights, enabling enhanced plant performance, reduced downtime, and seamless grid integration

REAL-TIME PLANT ANALYTICS

Generation Overview (MW)

Solar Generation (MW)

Energy by Source (MW)

Plant Output (MW)

Real-time Performance

Irradiance (W/m²)

Wind Speed (m/s)

Features & Benefits

Real-Time Monitoring & Control

Enables faster decision-making and enhances overall plant reliability through continuous visibility and control

High-Speed Data Acquisition

Captures granular operational data, providing deep insights into plant performance and efficiency

Advanced Alarm Management

Facilitates proactive fault detection and quick resolution, minimizing downtime and operational risks

Cybersecurity-Compliant Architecture

Ensures secure, reliable, and standards-compliant system operations against potential cyber threats

Analytics & Smart Dashboards

Empowers stakeholders with intuitive visualizations and actionable insights for data-driven decisions

Weather & Forecast Integration

Supports predictive planning and optimized generation through real-time and forecasted weather data

Seamless Integration

Compatible with EMS, BESS, SVG, and multi-vendor systems for unified plant operation

Flexible & Scalable Design

Adaptable architecture designed to support plants of all sizes and future expansions
